# SEMINAR HIGHLIGHTS

## Achieve confidence in placing long lasting composite restorations.

This one-day seminar will teach you practical solutions to your technical problems.

Restoring diseased posterior teeth in function using adhesive technologies (composite) is a dental intervention highlighting knowledge in anatomy, occlusion and adhesive dentistry to avoid premature occlusal contacts.

The speakers will discuss postoperative sensitivity, material wear, how to successfully adjust the cavity design and understand how to best avoid leakage and build up a multilayer entity. Learn about “the comp up technique” and discover how to understand and rebuild the occlusal relief in order to treat direct composite resin placements.

The day will provide you with valuable clinical techniques that can be put into practice immediately to provide more comfortable, aesthetic restorations.

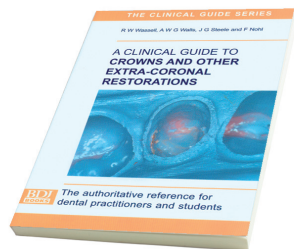

Comment from a past delegate who has attended preview BDA seminars:

 **Incredibly informative on a clinical level, very relevant for clinical practice. Excellent, one of the best events I have ever attended**   
*Christine Lupin, Dentist, Kent*

### A Clinical Guide to Crowns and Other Extra-Coronal Restorations

A contemporary overview of a vital subject, this clinical guide is intended to help practitioners provide high quality restorations by discussing treatment planning issues and the choice of materials as well as describing techniques.
