

MSc and Diploma in Endodontics

Join now! New cohort starting October 2011

Placing you at the forefront of endodontic care

Endodontics is one of the most technically challenging aspects of general dental practice. Demand is set to grow due to increasing life expectancy combined with greater awareness amongst the general public that diseased teeth can often be saved rather than extracted.

- 1 Most general practitioners are unable to use the new techniques that have developed dramatically during the last 20 years. This course offers you the knowledge and skills to give patients appropriate endodontic care
- 2 Designed for GDPs who want to develop the skills needed for the general practice of endodontic care
- 3 Delivered by leading professionals, academics and researchers in the field of Endodontic dentistry, and supported by respected academics from the field of continuing professional development

"Personally, in one year, my journey has gone from keen and informed "enthusiast" to a practitioner who has a deeper and more critical understanding of the science and various modalities. This has translated into me providing a high level of patient care as well as enjoying increased job satisfaction"

(Dr Allen Gaon BDS, MSC Endodontics 2010)

"The course was thought provoking, challenging and thoroughly enjoyable under the expert guidance of Professor Steier and his team"

(Peter Patel, MSC Endodontics 2010)

"A unique insight into the world of endodontics: an inspirational course that empowers the participant to thoroughly research and comprehend the subject. Essentially enabling clinical advancements to be made with confidence"

(Ian Bell, MSC Endodontics 2011)

Faculty
